PROFESSIONAL SUMMARY

Computer Science Engineering graduate with hands-on experience in Python, Flask, MySQL, and full-stack web development. Skilled in building RESTful APIs, relational database design, responsive front-end interfaces, and applying machine learning for predictive applications. Completed real-world projects involving POS systems, CRUD operations, ML-based price prediction, and web security concepts. Seeking an entry-level Python / Full Stack Developer role to build scalable, production-ready software.

TECHNICAL SKILLS

Programming Languages: Python, SQL, JavaScript

Web Frameworks: Flask, REST API Development

Machine Learning: pandas, scikit-learn, Regression Models (Linear Regression, Random Forest)

Front-End: HTML5, CSS3, JavaScript, Responsive Design

Databases: MySQL, Database Design, CRUD Operations

Tools & Platforms: Git, GitHub, VS Code, Postman

PROJECTS

Grocery Store Management System — Full-Stack Web Application

Python, Flask, MySQL, HTML5, CSS3, JavaScript

Live Demo: grocery-store-8dsd.onrender.com

- Developed a POS-style billing system managing 500+ SKUs, enabling real-time product, order, and pricing management for small grocery retailers
- Designed and built RESTful APIs in Flask (GET, POST, DELETE) supporting product, unit-of-measure, and order management workflows
- Implemented full CRUD operations with automatic bill calculation, cutting manual billing errors and processing time
- Architected a normalized MySQL database schema for transactions and order history, improving data integrity and query performance

Car Price Prediction — Machine Learning Web Application

Python, Flask, scikit-learn, pandas, HTML5, CSS3, JavaScript

- Built and deployed a Flask REST API serving a trained Random Forest regression model ($R^2 = 0.94$) that predicts used-car resale prices from 15,000+ listings
- Owned the end-to-end engineering pipeline — data preprocessing, model integration, and API design — with input validation to handle unseen categories safely
- Built a responsive front-end with dynamic, data-driven dropdowns for real-time price estimation based on brand, model, mileage, and engine specs

Simulating Social Engineering Attacks — Cybersecurity Project

SET Toolkit, Kali Linux, Phishing Simulation

- Conducted controlled phishing and social engineering simulations using the Social-Engineer Toolkit (SET) to identify credential-harvesting vulnerabilities in an isolated lab environment
- Authored user awareness documentation and best-practice guidelines to strengthen organizational credential-protection posture

INTERNSHIP EXPERIENCE

Ethical Hacking Intern — L&T EduTech Nov 2023 – Mar 2024

- Learned core ethical hacking fundamentals — reconnaissance, vulnerability scanning, and exploitation techniques — using Kali Linux, Wireshark, and Metasploit in controlled lab environments
- Documented findings and remediation steps in line with standard penetration testing methodology

EDUCATION

Bachelor of Technology, Computer Science and Engineering

Sri Venkateswara College of Engineering and Technology, Chittoor | 2021 – 2025

Board of Intermediate Education (12th)

Sri Chaitanya Junior College, Vijayawada | 2019 – 2021

CERTIFICATIONS

Python Full Stack Development — Pentagon Space
